

**eAdvice** has been designed to take advantage of telecommunications technology, helping you streamline the delivery of your business documents to both customers and vendors. With eAdvice you can quickly and cost effectively email and/or fax all your accounting forms including:

- Customer Invoices
- Credit Notes
- Payment Remittance Advices
- Purchase Orders
- Customer Statements

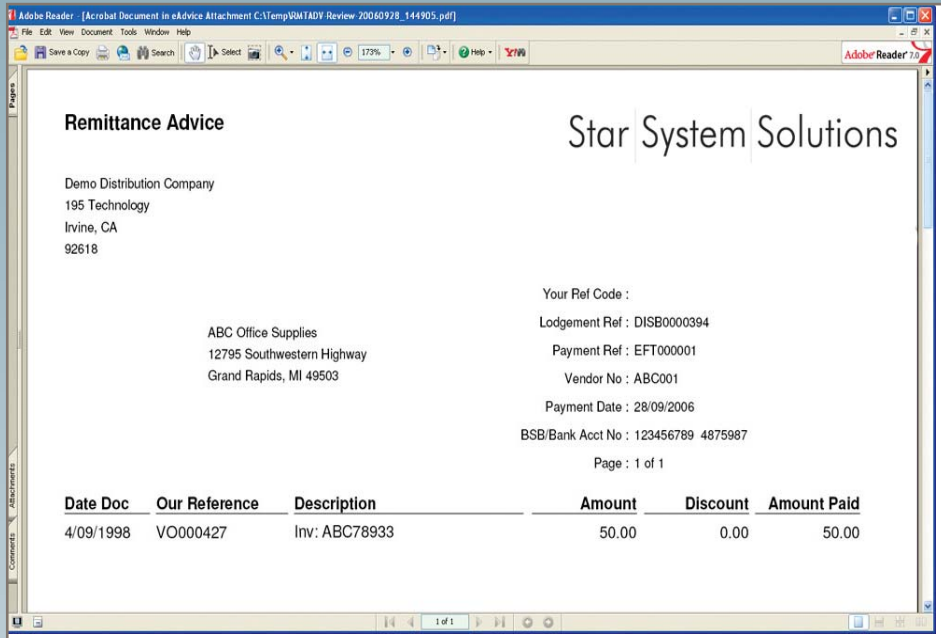

eAdvice will deliver either an individual document or a selected range of documents to your customers and vendors. The Star PDF Writer, included with eAdvice, automatically generates business documents in PDF format for distribution. You can also use the Star PDF Writer to create your own PDF's from any other business

application. All documents can be previewed before being delivered and reprinted at anytime. As well as having your own personalized messages for fax cover pages and email subject and detail lines, documents can be created with your company logo and your existing form layouts.

eAdvice can assist with reducing or eliminating the tedious process of folding, filling and posting of documents. Each form within eAdvice can be configured as your business demands. Contacts can be assigned to one or many forms and can be configured differently for each form while user security allows your business to limit access to each form.

eAdvice provides several widely used methods for transmitting your documents:

- Emailing through SMTP or MAPI compliant email systems, i.e., Outlook, Exchange, Notes, Eudora, etc.
- Faxing through:
  - WINFAX PRO
  - A fax application integrated with your email system
  - Fax hosting providers Interfax or Venali, which enable your faxes to be sent over the Internet as a Webservice without the need to install separate fax hardware.

eAdvice has an extensive audit log. Each email and fax requiring delivery to a customer or vendor is logged. Information contained within the audit includes:

- Customer or Vendor Codes
- Delivery Method
- Date Sent
- Delivery Status
- Message Details

If eAdvice archiving is activated, double clicking the audit log line will produce the original PDF file that was delivered to the customer or vendor.
